

Do Phishing Response Trends Differ in Europe?

Not exactly. Here's why it's a concern.

Cofense surveyed IT and security professionals across 5 European countries— the UK, Germany, France, the Netherlands and Belgium— to identify trends in phishing response.

Here's what we found, including comparisons to one another and results from the same U.S. survey data on phishing response trends.

#1 Security Concern

Phishing is the #1 security concern across these 5 nations.

UK

Germany

France

Netherlands

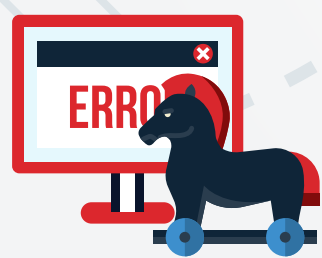

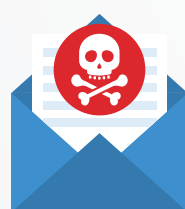

Belgium

78%
have dealt with email related threats.

In the U.S., it's slightly lower at 66%.

50%

are under-prepared.

In these countries, a combined average of 57% were honest enough to admit their response needs work. To compare...

63%
Germany

50%
France

44%
Netherlands

43%
U.S.

65%

are slowed by manual phishing reporting.

Or no reporting at all.

57%
Belgium

69%
France

64%
Netherlands

75%
U.S.

60%

wish they had automated email analysis

It's the #1 item on their wish lists. In the U.S., 33% want it.

91%

plan to upgrade their defences this year.

That's the good news.
80% in the US are following suit.
